

I-10/I-95 INTERCHANGE AREA PD&E STUDY

ALTERNATIVES PUBLIC MEETING

More information about the project is available on-line at www.10and95.com

The Florida Department of Transportation (FDOT) is conducting a Project Development and Environment (PD&E) Study of the I-10/I-95 Interchange in Jacksonville. The purpose of the study is to evaluate alternatives that will improve traffic flow through the interchange area. The study limits include I-10 from just east of McDuff Avenue to the I-95 Interchange and I-95 from Forrest Street to Kings Avenue (see map on back).

Proposed improvements include restriping of travel lanes, the reconfiguration of several ramps and new signage. FDOT is also evaluating features for pedestrians and bicyclists as well as visual appeal, lighting, sound reduction and modification to the areas beneath the Fuller Warren Bridge between College Street and Riverside Avenue.

You are invited to attend a meeting to review the proposed alternatives. FDOT staff will be available to discuss the proposed improvements, a short presentation will be given about the project and opportunities to express your views will be available.

Financial Project ID #433036-1

I-10/I-95 interchange at Fuller Warren Bridge, currently, during peak traffic times.
