## **Interstate 95 northbound and the northbound collector-distributor will have overnight traffic impacts for Overland Bridge sign installation**

**Jacksonville** – Interstate 95 northbound will have traffic pacing operations and the Interstate 95 northbound collector-distributor to the Acosta and Main Street bridges will have periodic overnight detours to allow construction crews to install directional overhead signs as part of the Overland Bridge project, weather permitting. Law enforcement officers will assist with directing and managing traffic.

Scheduled overnight traffic operations will affect motorists on the following dates:

**April 8 from 10 p.m. to April 9 at 5 a.m. – Interstate 95 northbound pacing operation:** Motorists traveling Interstate 95 northbound may experience delays associated with traffic pacing operations beginning south of J. Turner Butler Boulevard to Park Street on the Fuller Warren Bridge. Traffic pacing is when law enforcement will be present in all travel lanes driving at a reduced speed from south of J. Turner Butler Boulevard, to provide construction crews with the opportunity to install overhead signage without fully stopping traffic on the interstate.

**April 5-15 from 8 p.m. to 6 a.m. – Interstate 95 northbound collector-distributor detour:** Motorists on Interstate 95 northbound traveling to downtown using the Acosta or Main Street bridges will have periodic nightly detours to the Park Street off ramp, and will need to turn left on Park Street and make another left onto the Interstate 95 southbound on ramp to the Fuller Warren Bridge, then exit Interstate 95 southbound using the San Marco Boulevard ramp to San Marco Boulevard where they will make a left turn to reconnect to either the Acosta or Main Street bridges. *See attached map.*

Up-to-date lane closure information is available on the project website at:
