One block of Main Street Converted to Two-Way Traffic

Jacksonville – Jacksonville drivers are reminded that Main Street between State Street and Union Street has been converted from a one-way to a two-way street. The street has been re-stripped to reflect this change, which improves traffic flow through downtown. Drivers traveling east on Union Street are also now able to turn left on Main Street to access State Street.

The work is a component of FDOT’s State Street, Union Street and Mathews Expressway resurfacing and improvement project. The \$13 million project began in December 2015 and is scheduled for completion this fall.
