1. EXECUTIVE SUMMARY

CHW has prepared the following Traffic Impact Analysis (TIA) for the proposed *Rise Gainesville 34th Street*, located on the east side of SW 34th Street between SW 35th Place and SW 39th Boulevard in Gainesville, Florida. The site will provide approximately 227 dwelling units. The site proposes one access, a connection to the existing Ridgemar Commons driveway connecting to SW 34th Street. The proposed layout of the site is provided in the **Appendix A** concept exhibit. The study is based on the City of Gainesville Engineering Design and Construction Manual requirements, Chapter 7 Traffic Study Guidelines, and is in conformance with the methodology letter dated December 18th, 2020, see **Appendix B**.

Based on the results of this analysis, no off-site transportation improvements are recommended to support this development.

2. STUDY AREA

The study area, as provided in **Figure 1** consists of the following intersections:

- SW 34th Street at SW Archer Road
- SW 34th Street at SW 35th Place
- SW 34th Street at Ridgemar Commons Access
- SW 34th Street at SW 39th Boulevard
- SW 35th Place at SW 32nd Terrace
- Ridgemar Commons Access at Project Site Access

Figure 1 | Study Area

3. TRIP GENERATION

The estimated trip generation for *Rise Gainesville 34th Street* is based on the Institute of Transportation Engineers' (ITE) Trip Generation Manual, 10th Edition. The estimated trip generation is provided in **Table 1**. The site is expected to generate significant multi-modal traffic, as it is close in proximity to the UF campus. A 20% multi-modal reduction has been applied to the daily, AM Peak, and PM Peak trips to account for the multi-modal traffic, see **Appendix B** for additional information.

Table 1 | Trip Generation

Rise Gainesville 34th Street Trip Generation									
Land Use	ITE LU Code	Variable DU	Daily	AM Peak			PM Peak		
			Total	Total	In	Out	Total	In	Out
Multifamily Housing (Mid-Rise)	221	227	1235	76	20	56	97	59	38
20% Multi-Modal Reduction			247	15	4	11	19	12	7
Total			988	61	16	45	78	47	31

4. DATA COLLECTION

Turning movement counts at the study area intersections were performed during the AM and PM peak hours, for two consecutive weekdays, during the week of February 8th, 2021. The two days of counts were averaged for the analysis. The raw count data and the averaged turning movement counts are provided in **Appendix C**.

The count data was adjusted based on the seasonal adjustment factor. **Figure 2** provides the existing (peak season) conditions at all study area intersections.

Growth rates were determined based on historical ADT where available to derive the 2023 background volumes. A minimum of 1.0% yearly growth rate was used for roadways with historical growth rates less than 1.0%. A 2.0% yearly growth rate was used when no data was available to establish a growth rate factor, per the City of Gainesville Design Construction Manual. **Appendix D** provides the data used to determine the peak season and background traffic volumes. **Appendix E** provides the

peak season and background turning movements at all study area intersections in tabular form. **Figure 3** illustrates the background conditions at all study area intersections.

The methodology noted that a COVID-19 factor applied to the counted volumes would be considered, however the City of Gainesville defers to FDOT recommendations regarding whether a COVID-19 factor should be used. FDOT does not currently require COVID-19 factors to be applied to traffic volumes, as traffic volumes are approaching pre-COVID-19 typical volumes, so a COVID-factor was not applied to the study traffic volumes.

Figure 2 | Existing (Peak Season) Turning Movements

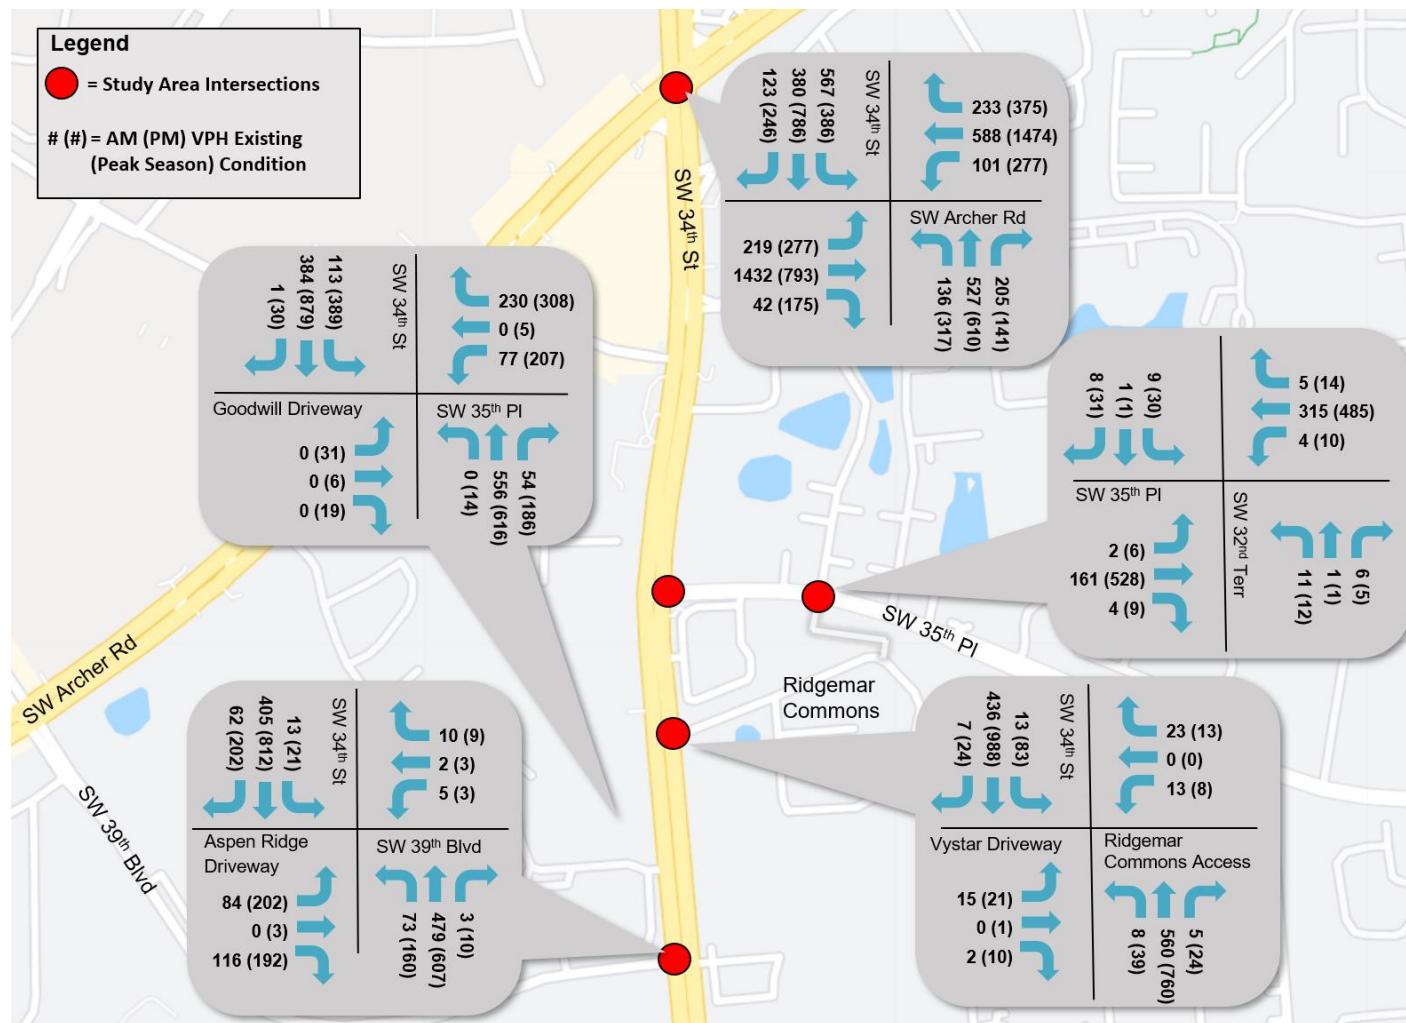

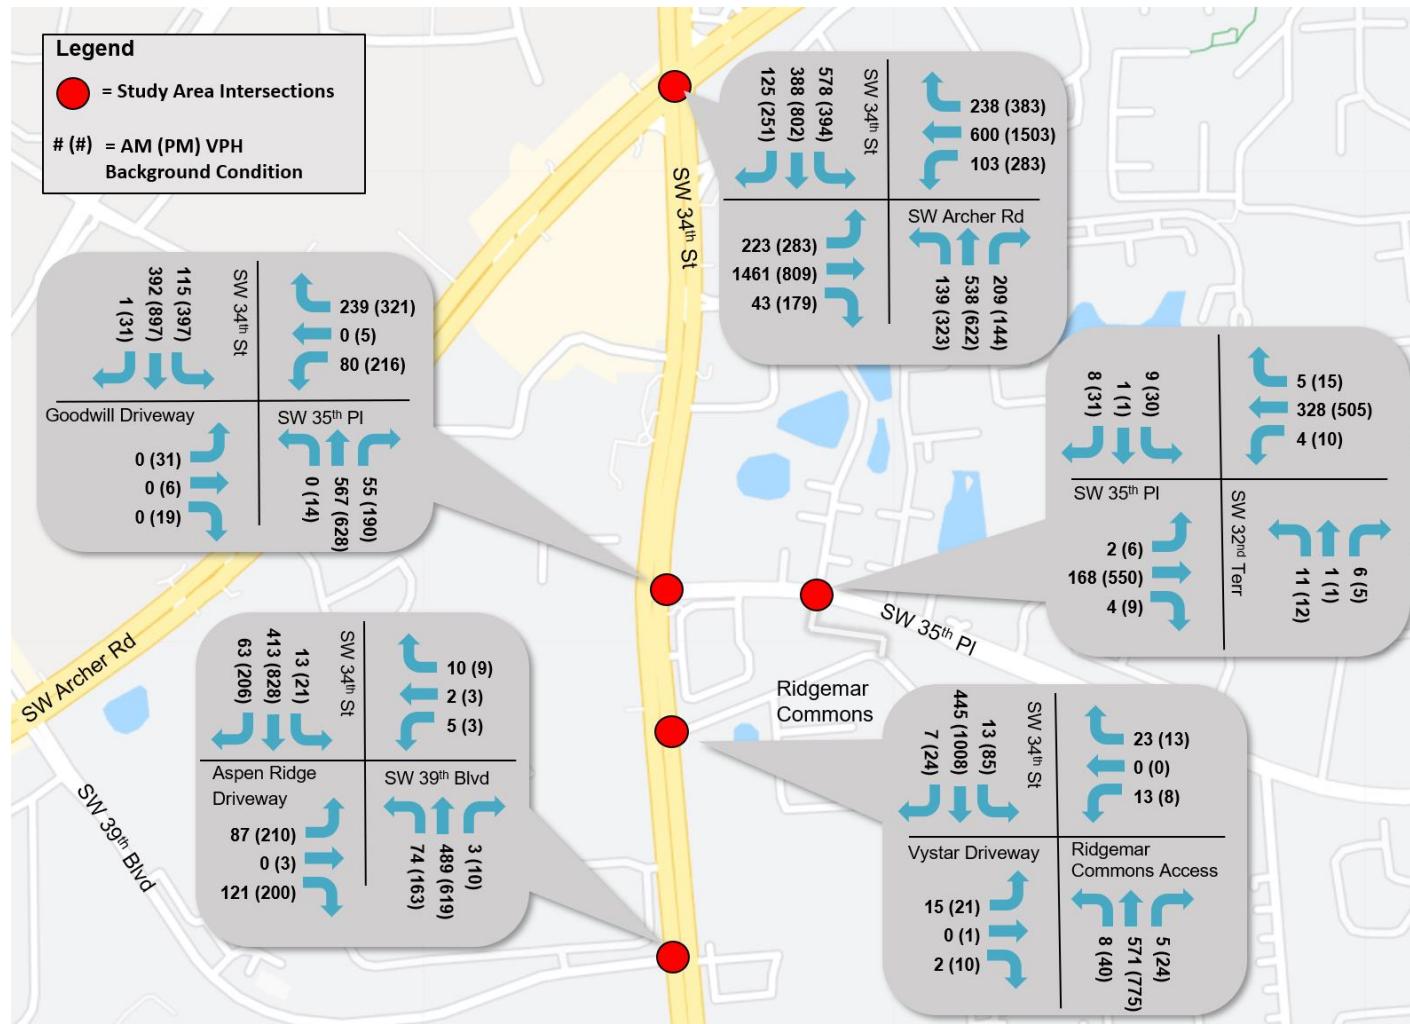

Figure 3 | Background Turning Movements

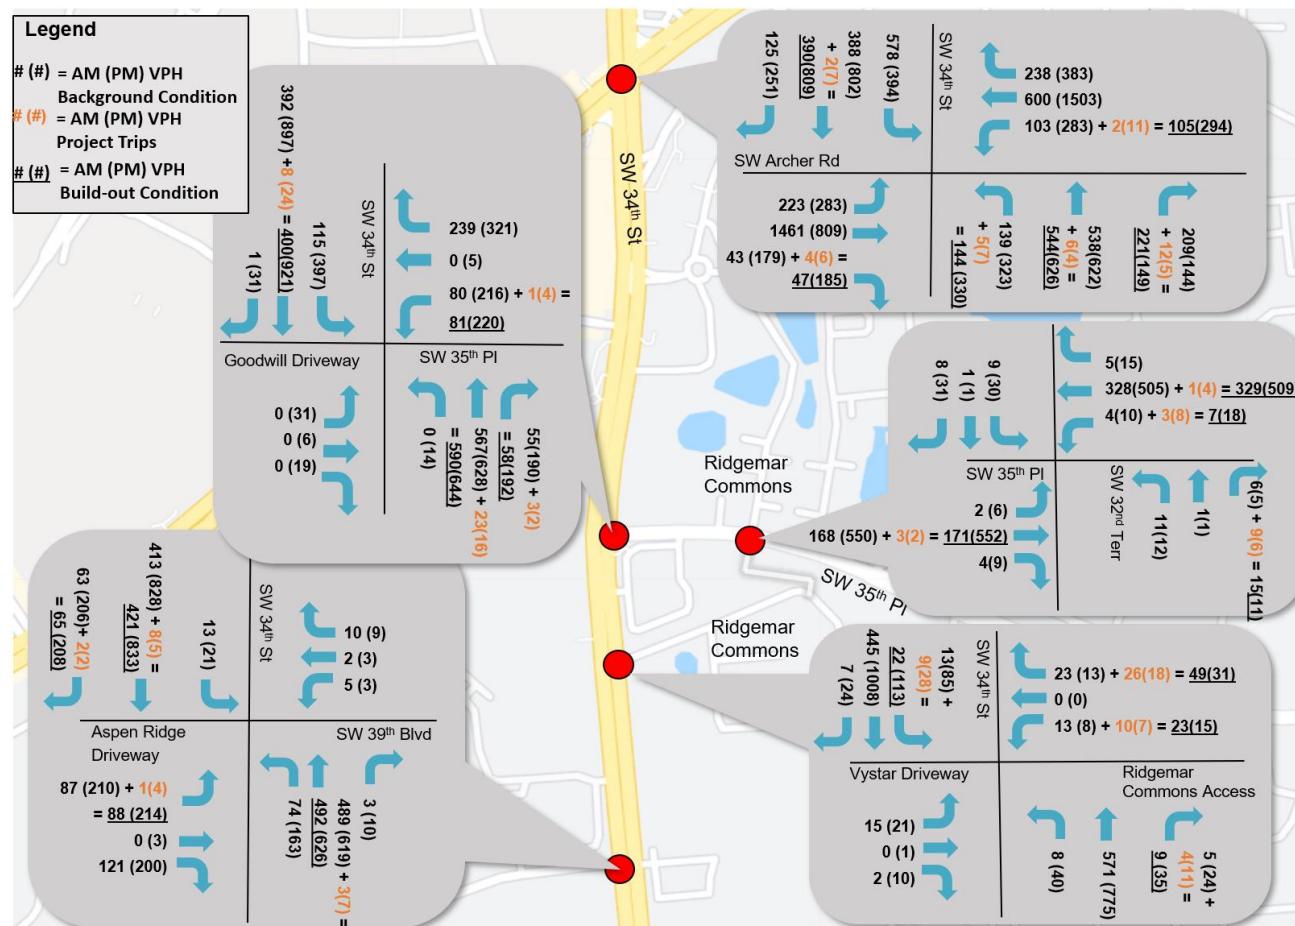

5. TRIP DISTRIBUTION

The project trip distribution for this site is expected to mimic the trip distribution of the adjacent Ridgemar Commons apartments. The trip distribution at SW 34th Street at Archer Road and SW 34th Street at SW 39th Boulevard are based on the AM and PM peak hour turning movement counts at these intersections. The trip distribution calculations, derived from the counts performed at the access points of Ridgemar Commons apartments, are provided in **Appendix F**.

The background and project trip turning movements are combined to form the build-out condition illustrated in **Figure 4**.

Figure 4 | Build-out Turning Movements

6. ANALYSIS

Intersection analyses were performed at the intersections provided in the study area under the following scenarios:

- Existing (Peak Season) Conditions
- Background Conditions
- Build-out Conditions

All Study Area intersections were analyzed during the AM and PM peak hours. HCS 7 was used to analyze the stop-controlled study area intersections and Synchro 11 was used to analyze the signalized intersections. **Table 2** and **Table 3** provide the LOS, delay, v/c ratio, and 95th percentile queue lengths resulting from the analyses. The Synchro and HCS reports are provided in **Appendix G**.

The following intersection movement deficiencies are highlighted in **Table 2** and **Table 3**:

- Movements operating with a LOS of F
- v/c ratios exceeding 1.0
- 95th percentile queue lengths exceeding the available storage

Table 2: AM Intersection Analysis Summary

Yellow highlight = deficiency occurring without project traffic

Red highlight = deficiency occurs due to added project trips

As shown in **Tables 2 and 3**, the following deficiencies occur with the addition of project trips:

During the PM peak-hour the southbound thru/right movement operates with a Level of Service of F at the intersection of Archer Road and SW 34th Street, during the build-out scenario. The volume to capacity remains under 1.0, so cycle failures are not expected. It is common for the lower volume movements to experience delays at this level while the main street with higher traffic volumes, Archer Road in this case, can be served. This deficiency can be corrected by adding an additional 1.0 second to the southbound though/right movement split time and removing 1.0 second from the northbound left movement. The results of the signal retiming during both the existing and build-out scenarios are provided in **Table 4**.

During the PM peak-hour the westbound left movement operates with a Level of Service of F at the intersection of SW 34th Street with SW 35th Place. The volumes to capacity remain less than 1.0, so cycle failures are not expected. The added project traffic to this movement will be minor with only 3 vehicles per hour based on our forecast. This deficiency can be corrected by adding an additional 2.0 seconds to the westbound left movement split time and removing 2.0 seconds from the eastbound through/right movement. The results of the signal retiming during both the existing and build-out scenarios are provided in **Table 4**.

Table 4: PM Intersection Analysis Summary with Improvements

	Intersection Total		C	25.2			C	26.3		

As illustrated in **Table 4**, the LOS of F that occur with the addition of project trips can be corrected with minor changes to the signal timing.

7. SUMMARY OF TRANSPORTATION IMPACTS

Sidewalks are provided along SW 34th Street along the frontage of *Rise Gainesville 34th Street*. Three sidewalk connections are proposed from the project site directly to the sidewalk along SW 34th Street. A paved shoulder is provided along SW 34th Street that can be utilized by cyclists accessing the project.

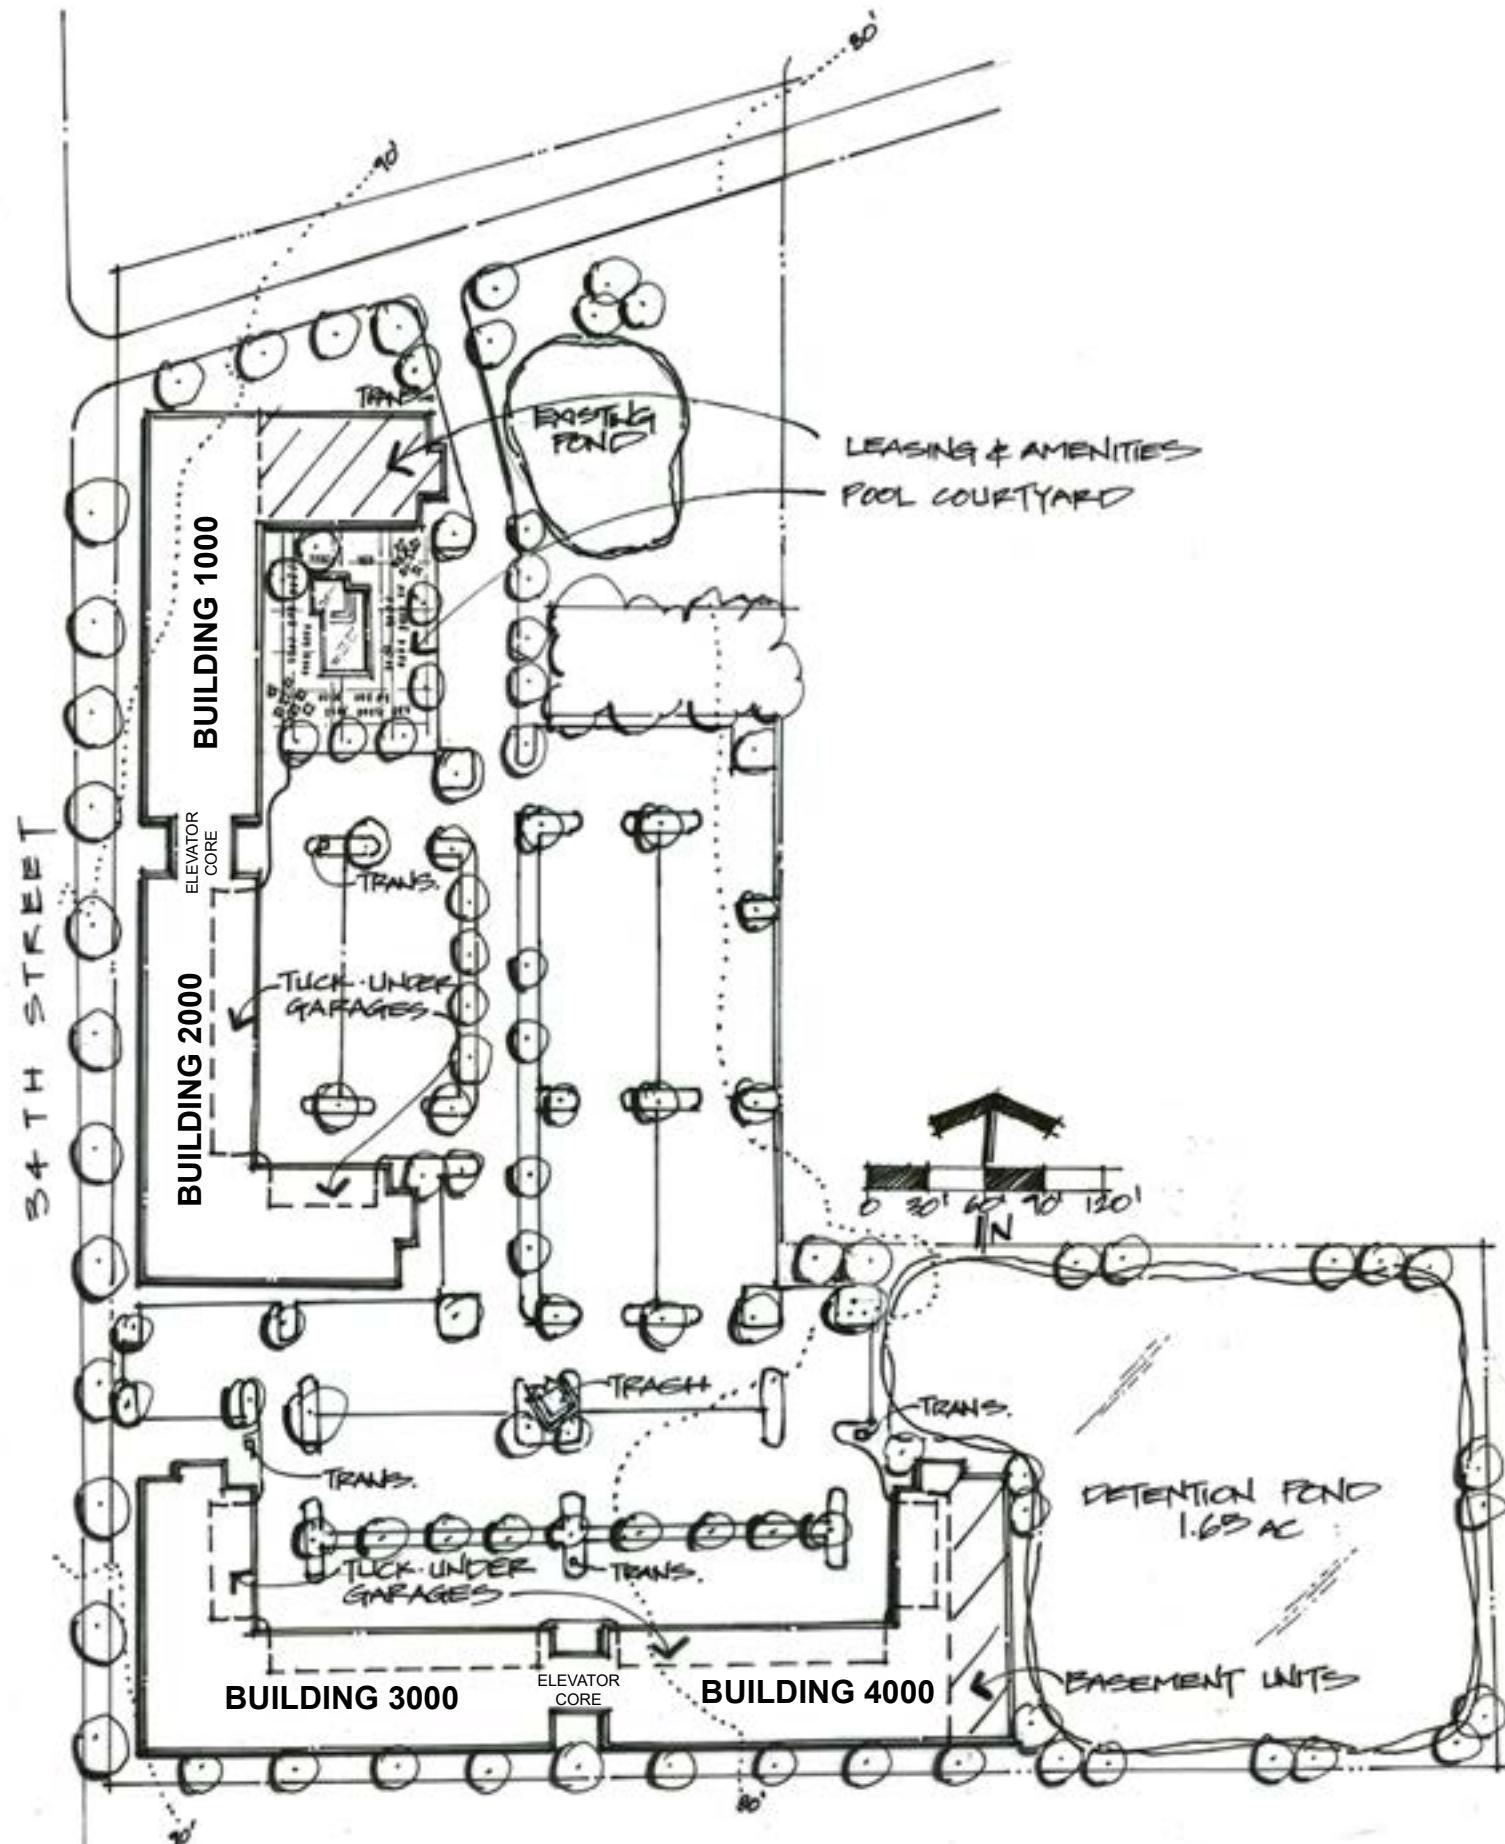

8. CONCLUSIONS AND RECOMMENDATIONS

This study's operational analysis indicates that the added project traffic causes two movements to change from a level of service E to a level of service of F. The added project trips do not exceed the capacity of these movements and the level of delay reported is typical during the peak hours, where cycle lengths are longer and green time favors the higher volume movements.

It is of my professional opinion that the LOS of F is acceptable for these build-out movements. However, minor signal retiming adjustments can be made, by providing more green time to these two movements, resulting with a LOS of E. As illustrated in **Table 4**, the signal timing adjustments provide an improvement during both the build-out and the existing scenario, resulting with less total intersection delay at both intersections. CHW can, at the City's request, adjust the signal timing in accordance with the improvement scenario and monitor the intersection to ensure that no unexpected deficiencies occur.

Re: Rise Residential SW 34th Street, Gainesville, FL

Dear Scott,

CHW is preparing a Traffic Impact Analysis (TIA) Methodology for the proposed Rise Residential SW 34th Street located on the east side of SW 34th Street between SW 35th Place and SW 39th Boulevard in Gainesville, Florida. This site will provide approximately 227 dwelling units. Preliminary plans for the site are provided in Attachment A. The methodology is based on the City of Gainesville Engineering Design and Construction Manual requirements, Chapter 7 Traffic Study Guidelines.

Please review the methodology and either provide comment for the purposes of modification/clarification or provide acceptance.

Study Area

The study area will consist of the following intersections:

- SW Archer Road and SW 34th Street
- SW 34th Street and SW 35th Place
- SW 35th Place and Ridgemar Commons access
- SW 34th Street and Ridgemar Commons access
- Ridgemar Commons driveway to SW 34th Street and project site access
- SW 34th Street and SW 39th Boulevard

Land Use and Trip Generation

The trip generation for the Rise Residential SW 34th Street will be based on the Institute of Transportation Engineer's (ITE) Trip Generation Manual, 10th Edition. The estimated trip generation is provided below. The TIA will estimate the trip generation based on the number of bedrooms.

The Rise Trip Generation										
Land Use	ITE LU Code	Variable DU	Daily	AM Peak			PM Peak			
			Total	Total	In	Out	Total	In	Out	
Multifamily Housing (Mid-Rise)	221	227	1235	76	20	56	97	59	38	

Data Collection

Turning movement counts at the following intersections will be performed during the AM and PM peak two hours, for two consecutive weekdays. Counts will be collected on a Tuesday, Wednesday, or Thursday. The counts will include pedestrians, bicycles, and trucks, in addition to passenger vehicles. The counts will be performed at the following intersections:

- SW Archer Road and SW 34th Street
- SW 34th Street and SW 35th Place
- SW 35th Place and Ridgemar Commons access
- SW 34th Street and Ridgemar Commons access
- SW 34th Street and SW 39th Boulevard

The count data will be adjusted based on the seasonal adjustment factor and by the growth rate to forecast the estimated background traffic. The growth rate will be determined based on historical ADT where available and will be based on the City of Gainesville Engineering Design and Construction Manual, Chapter 7 Traffic Study Guidelines.

Due to the traffic volume impacts of COVID-19, CHW will use available traffic count data from a 2019 count provided by FDOT traffic online to derive a factor that converts the turning movement count data into typical Non-COVID-19 traffic volumes. If the 2021 turning movement count volumes are greater than the 2019 volumes, a factor will not be applied.

Trip Distribution

The project trip distribution is expected to mimic the trip distribution of trips to and from the Ridgemar Commons apartments. The turning movement counts provided at the access points of Ridgemar Commons will be used to determine the project trip distribution.

Analysis

The analysis will be performed at the intersections provided in the study area under the following scenarios:

- Existing (peak season) conditions
- Background conditions
- Build-out conditions
- Build-out with improvements, if applicable

The intersection operation analysis will review the delay, LOS, V/C, and 95th percentile queue length of each intersection movement as well as the intersection as a whole. The signalized intersections will be analyzed using Synchro 11 and the non-signalized intersections will be analyzed using HCS 7. The reports will be provided in the appendices and the program files will be provided along with the report.

A summary of transportation system impacts will be provided as per the Traffic Study Guidelines. This section will include a review of the impact to cyclists and pedestrians at all study area intersections.

Any needed roadway modifications based on this analysis will be identified and modeled to demonstrate that the improvement mitigates the deficiency. If signal timing is recommended, all impacted traffic signals along the corridor will be taken into consideration.

Report

A draft report, including, as a minimum, the following will be submitted for review and comment.

- Study Area Map
- Existing Conditions
- Trip Generation
- Data Collection
- Trip Distribution
- Analysis
 - AM and PM Intersection LOS, Delay, V/C and 95th Percentile Queue Length Analysis
 - Summary of Transportation System Impacts
- Conclusion and Recommendations
- Appendices with Supporting Documentation

Following any revisions, based upon staff comments, we will prepare a final signed and sealed report.

If your office concurs with this methodology, please find the appropriate signature block below and sign as such. Please return a signed copy to our office for our records.

Thank you for your review and consideration.

Sincerely,
CHW

Brian Snyder, P.E.
Project Manager

I concur with the traffic study methodology presented for the proposed Rise Residential SW 34th Street site.

Scott Wright

Since you haven't heard back from Tom, here is City confirmation that we are good with the proposed methodology. You can always just adjust the traffic study as needed to incorporate their comments.

Subject: FW: The Rise TIA Methodology

Tom,

I sent the attached methodology to Scott back in mid-December and did not copy you on it. I can't recall whether you did not need to review since there is no direct connection or if it depends on whether there is a "significant change" to the Ridgemar Commons connection. Regardless, can you let me know whether the intersections being counted are acceptable so that we can order the counts?

- SW Archer Road and SW 34th Street
- SW 34th Street and SW 35th Place
- SW 35th Place and Ridgemar Commons access
- SW 34th Street and Ridgemar Commons access
- SW 34th Street and SW 39th Boulevard

Additionally, Scott wanted to defer to FDOT regarding providing a specific COVID factor. I address this in the methodology, stating that we will compare the existing counts with 2019 counts and use a factor if the 2019 counts are higher but if FDOT requires a different approach, we will use that.

Thank you,

BRIAN SNYDER | Project Manager

Subject: Multi-modal reduction - The Rise SW 34th St

Brian –

We allow a 20% multi-modal reduction for multi-family development this area, based on the information from a study done for nearby Lexington Crossing. This is primarily in the form of transit riders. Admittedly we need to update this study, but this is the information we have available for now.

If you want more detail:

Hourly Average	AM PEAK			PM PEAK		
	Auto	Bike/Ped	Transit	Auto	Bike/Ped	Transit
Royal Village (Adjacent to University)	80%	10%	10%	79%	18%	3%
Lexington Crossing (Southwest)	70%	1%	29%	89%	2%	9%
Wisteria Downs (Downtown)	89%	10%	1%	87%	12%	1%
Cobblestone (Northwest)	93%	0%	6%	96%	1%	4%
Museum Walk (Urban Village)	66%	19%	15%	74%	16%	10%
The Estates (Urban Village - ind. study)	59%	3%	38%	77%	5%	18%

Intersection Summary

Area Type: Other

Cycle Length: 180

Actuated Cycle Length: 180

Offset: 68 (38%), Referenced to phase 4:SWT and 8:NET, Start of Yellow

Natural Cycle: 145

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.95

Intersection Signal Delay: 56.8

Intersection LOS: E

Intersection Capacity Utilization 89.1%

ICU Level of Service E

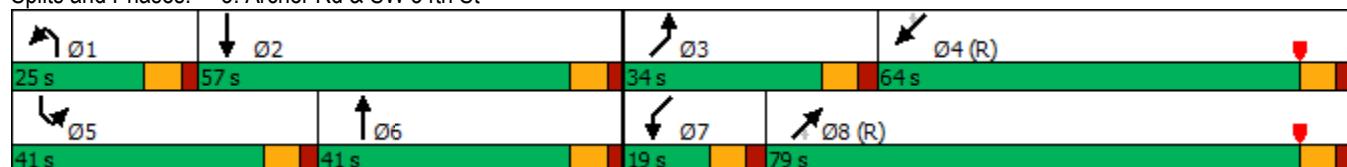

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 3: Archer Rd & SW 34th St

Intersection Summary

Area Type: Other

Cycle Length: 80

Actuated Cycle Length: 80

Offset: 17 (21%), Referenced to phase 2:SBT, Start of Yellow

Natural Cycle: 95

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.52

Intersection Signal Delay: 11.8

Intersection LOS: B

Intersection Capacity Utilization 44.8%

ICU Level of Service A

Analysis Period (min) 15

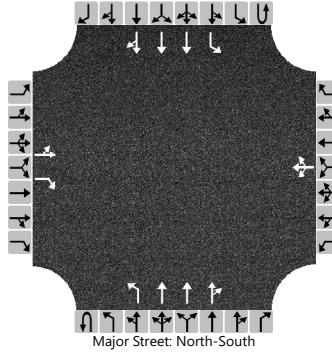

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 9: SW 34th St & SW 39th Blvd

Intersection Summary

Area Type: Other

Cycle Length: 180

Actuated Cycle Length: 180

Offset: 68 (38%), Referenced to phase 4:SWT and 8:NET, Start of Yellow

Natural Cycle: 145

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.96

Intersection Signal Delay: 57.5

Intersection LOS: E

Intersection Capacity Utilization 90.3%

ICU Level of Service E

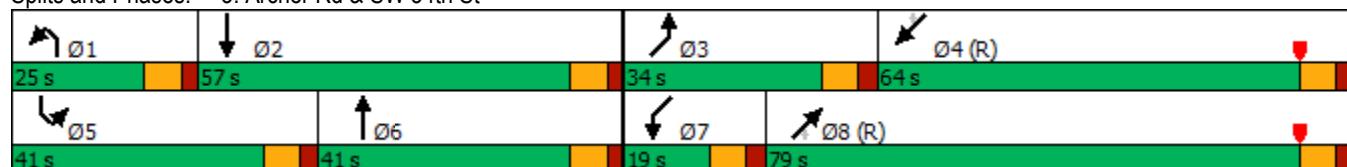

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 3: Archer Rd & SW 34th St

Intersection Summary

Area Type: Other

Cycle Length: 80

Actuated Cycle Length: 80

Offset: 17 (21%), Referenced to phase 2:SBT, Start of Yellow

Natural Cycle: 95

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.54

Intersection Signal Delay: 11.9

Intersection LOS: B

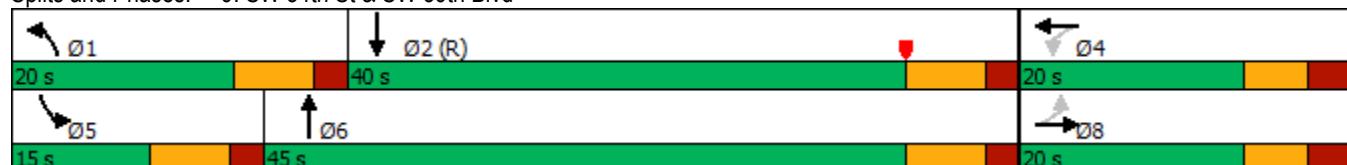

Intersection Capacity Utilization 45.0%

ICU Level of Service A

Analysis Period (min) 15

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 9: SW 34th St & SW 39th Blvd

Intersection Summary

Area Type: Other

Cycle Length: 180

Actuated Cycle Length: 180

Offset: 68 (38%), Referenced to phase 4:SWT and 8:NET, Start of Yellow

Natural Cycle: 145

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.96

Intersection Signal Delay: 57.9

Intersection LOS: E

Intersection Capacity Utilization 90.7%

ICU Level of Service E

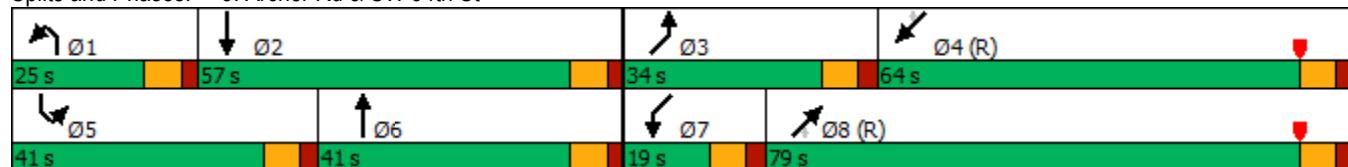

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 3: Archer Rd & SW 34th St

AM Build-out

6: SW 34th St & Goodwill/SW 35th Pl

Intersection Summary

Area Type: Other

Cycle Length: 190

Actuated Cycle Length: 190

Offset: 8 (4%), Referenced to phase 4:SWT and 8:NET, Start of Yellow

Natural Cycle: 145

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.01

Intersection Signal Delay: 66.2

Intersection LOS: E

Intersection Capacity Utilization 90.8%

ICU Level of Service E

Analysis Period (min) 15

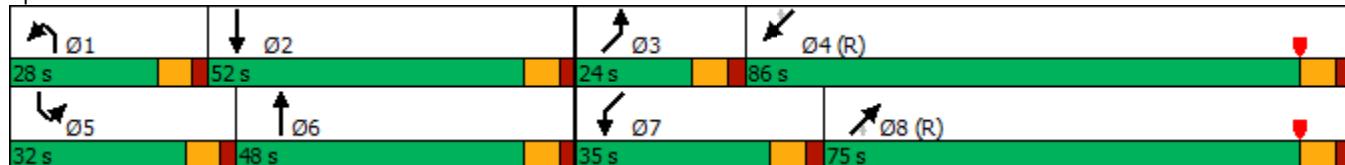

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 3: Archer Rd & SW 34th St

Intersection Summary

Area Type: Other

Cycle Length: 95

Actuated Cycle Length: 95

Offset: 61 (64%), Referenced to phase 2:SBT and 6:NBT, Start of Yellow

Natural Cycle: 125

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.90

Intersection Signal Delay: 26.0

Intersection LOS: C

Intersection Capacity Utilization 80.2%

ICU Level of Service D

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 6: SW 34th St & Goodwill/SW 35th Pl

Intersection Summary

Area Type: Other

Cycle Length: 95

Actuated Cycle Length: 95

Offset: 74 (78%), Referenced to phase 2:SBT, Start of Yellow

Natural Cycle: 95

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.77

Intersection Signal Delay: 22.5

Intersection LOS: C

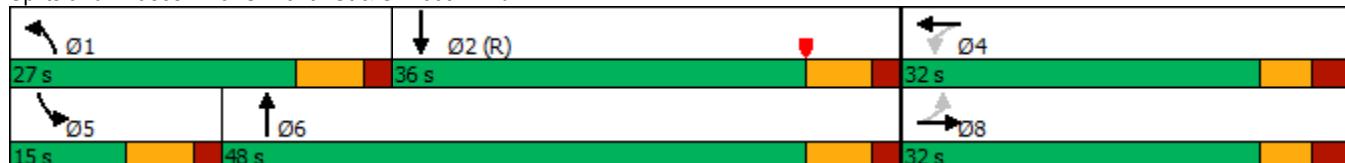

Intersection Capacity Utilization 63.8%

ICU Level of Service B

Analysis Period (min) 15

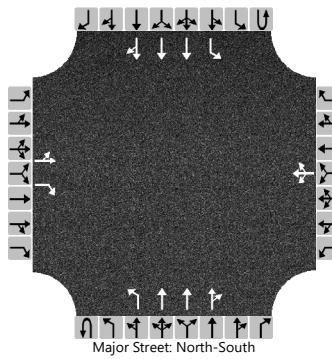

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 9: SW 34th St & SW 39th Blvd

Intersection Summary

Area Type: Other

Cycle Length: 190

Actuated Cycle Length: 190

Offset: 8 (4%), Referenced to phase 4:SWT and 8:NET, Start of Yellow

Natural Cycle: 145

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.03

Intersection Signal Delay: 67.6

Intersection LOS: E

Intersection Capacity Utilization 92.1%

ICU Level of Service F

Analysis Period (min) 15

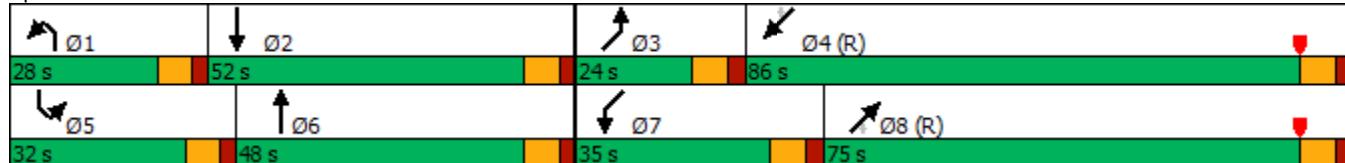

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary

Area Type: Other

Cycle Length: 95

Actuated Cycle Length: 95

Offset: 61 (64%), Referenced to phase 2:SBT and 6:NBT, Start of Yellow

Natural Cycle: 125

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.94

Intersection Signal Delay: 27.1

Intersection LOS: C

Intersection Capacity Utilization 81.0%

ICU Level of Service D

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 6: SW 34th St & Goodwill/SW 35th Pl

Intersection Summary

Area Type: Other

Cycle Length: 190

Actuated Cycle Length: 190

Offset: 8 (4%), Referenced to phase 4:SWT and 8:NET, Start of Yellow

Natural Cycle: 145

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.03

Intersection Signal Delay: 68.3

Intersection LOS: E

Intersection Capacity Utilization 92.4%

ICU Level of Service F

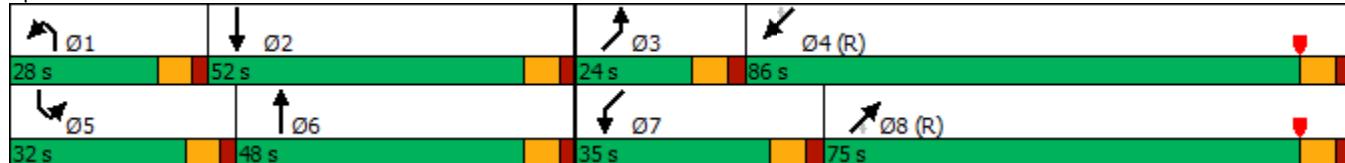

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary

Area Type: Other

Cycle Length: 95

Actuated Cycle Length: 95

Offset: 61 (64%), Referenced to phase 2:SBT and 6:NBT, Start of Yellow

Natural Cycle: 125

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.85

Intersection Signal Delay: 26.3

Intersection LOS: C

Intersection Capacity Utilization 81.3%

ICU Level of Service D

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 6: SW 34th St & Goodwill/SW 35th Pl
